Algae Based Polymers, Blends, and Composites: Chemistry, Biotechnology and Material Sciences offers considerable detail on the origin of algae, extraction of useful metabolites and major compounds from algal bio-mass, and the production and future prospects of sustainable polymers derived from algae, blends of algae, and algae based composites. Algae Based Polymers, Blends, and Composites: Chemistry, Biotechnology and Material Sciences offers considerable detail on the origin of algae, extraction of useful metabolites and major compounds from algal bio-mass, and the production and future prospects of sustainable polymers derived from algae, blends of algae, and algae based composites. Algae-based materials can exist in the form of algal polymers, blends, and composites of algal biomass or biomolecules with other polymeric materials. Important algal polymers include polysaccharides and sulfated polysaccharides such as carrageenan, agars, alginates, and polyhydroxyalkanoates.
