

# Download How To Build A Home Or Office Web Server

All great websites have a great server behind them. In this tutorial, I'll show you how to set up a dedicated web server (with Apache, MySQL, and PHP) using that old computer you have lying around the house and some free software. Unless you have this sort of setup in your garage, you're better off using a professional web hosting company rather than trying to run an internet server from your home office. A desktop computer is designed for one person who needs a user-friendly operating system to run desktop applications such as a word processor, a spreadsheet, an email client, and a Web browser. A ...
