

Download Language Preschool Child Margaret Harris

Language development is a process starting early in human life. Infants start without knowing a language, yet by 10 months, babies can distinguish speech sounds and engage in babbling. Child development entails the biological, psychological and emotional changes that occur in human beings between birth and the conclusion of adolescence, as the individual progresses from dependency to increasing autonomy. Discover the importance of early language, listening, and speaking on literacy development. If you suspect that your child or a student is struggling with speech, language, and/or hearing problems, learn more about testing and assessment, accommodations, and additional professional help. Margaret Rosenfeld, MD, MPH, is attending physician at Seattle Childrens Hospital and Professor in the Department of Pediatrics at the University of Washington School of Medicine., Language Preschool Child Margaret Harris.
