

Download Rapid Serial Visual Presentation

Rapid serial visual presentation is a Paradigm used by psychologists to study an attentional phenomena named "the attentional blink". The RSVP tasks asks a participant to observe a continuous presentation of multiple separate visual images or objects that appear in rapid succession (very short duration of exposure time (e.g. 15 ms)).

2.4 Rapid serial visual presentation It has been known for a long time that backward masking can act in one of two ways: integration and interruption (Turvey, 1973). When the SOA between target and mask is very short, integration occurs; that is, the two items are perceived as one, with the result that the target is difficult to report, just as when one word is written over another.

Rapid serial visual presentation (RSVP) is a method of displaying information (generally text or images) in which the text is displayed word-by-word in a fixed focal position. Aside from a basic reading aid, RSVP is being researched as a tool to increase individual reading rates. Rapid serial visual presentation (RSVP) seems to be one of the main alternatives. We studied the effects of a RSVP app (i.e. Spritz) on comprehension and visual fatigue. We found that Spritz impairs literal comprehension and increases visual fatigue., Rapid Serial Visual Presentation.
